The **ONYX** software product has several components...

The **OPR** module is multi-faceted and can be used for indexing, scanning and, if desired, the cashiering of Official Public Records (OPR's). **ONYX** is an excellent vehicle for the scanning of OPR's and creating an index database. The OPR component is not dependent on the cashiering module.

The **Cashier** module has the ability to cashier all products in the clerk's office. It also functions as an optional first step in the document recording process of cashiering, indexing, scanning, search and retrieval. The cashiering module categorizes clerk products and all associated fees, providing transaction search ability and many reports to increase the efficiency and accuracy of daily, weekly, or monthly balancing.

The **Vital Statistics** modules are state compliant systems used to manage both formal and informal marriages, applications and all associated forms as well as birth and death records. The marriage license module auto-indexes from the application. After scanning, all vital records can be retrieved easily for certified copies. Vital records are easily searched. This module also generates numerous reports for increased efficiency.

The **Assumed Name** module is an optional module for clerks who record and manage their business records separate from their other Official Public Records and wish to do so in more detail.

The **Map Plat, Commissioner's Court and Miscellaneous Module** is another optional module for those clerks that desire to separate map plats and other miscellaneous records (DD Form 214's, cattle brands, etc.) from their OPR's. Map plats can be recorded in greater detail while using a unique recording number or the same number as property records. This module is an excellent tool for the indexing and archiving of Commissioner's Court Minutes, agenda's and back-up material.
